| Mean       | 10                  | 17      | 58.3   |
| LSD (0.05) | 3                   | 4       | 1.2    |

**Notes:** Grain yields adjusted to 12% moisture content. Shaded values are not statistically different from the highest value within a column. Drought conditions persisted throughout much of the growing season. This, coupled with freeze injury sustained during early April, resulted in sloughed tillers. Low foliar disease pressure observed during grain-fill, but Fusarium foot rot was present throughout the trial during the latter part of grain-fill.

Partial financial support provided by the Oklahoma Wheat Commission and the Oklahoma Wheat Research Foundation.
